

SECTION 1

INTRO

VULNITEK

VULNITEK: AI-Native AppSec Execution Platform

One-liner: We cut AppSec noise and accelerate vulnerability closure by unifying SAST + DAST + AI validation in one governed workflow.

SAST

DAST

AI Validation

Governance

Enterprise AppSec

Company

- LeeCognitek AI & Software Solutions Pvt Ltd
- Product brand: VULNITEK

Status

- Pilot-ready
- Raising ~USD 1.2M for 18-month execution runway

SECTION 2

PROBLEM STATEMENT

Security teams are overloaded while risk and release speed both increase

Current AppSec operations suffer from noisy findings, disconnected tools, and weak exploitability proof.

Core pain

- High false-positive volume drains senior triage bandwidth
- SAST and DAST silos create duplicated effort
- Weak evidence quality slows fix prioritization
- Governance/audit readiness is often an afterthought

Business impact and why now

- Delayed releases and growing security debt
 - Remediation cost rises when signal quality is poor
 - AI-assisted coding increases velocity and attack surface
- Need: proof-backed vulnerabilities with governance, not bigger queues.

SIGNAL QUALITY

Low

Too much noise to action

WORKFLOW

Fragmented

Separate SAST / DAST outputs

EVIDENCE

Weak

Limited exploitability proof

SECTION 3

SOLUTION

Ingest -> Analyze -> Validate -> Close

VULNITEK provides an end-to-end AppSec execution workflow with human-in-control governance.

What we provide

- Ingest: repo/zip targets, auth profiles, policy and budget controls
- Analyze: SAST + DAST orchestration with language-aware routing
- Validate: replay, confidence scoring, false-positive reduction
- Close: triage lifecycle, ownership, evidence timelines, remediation guidance

How customers consume it

- CLI for CI/CD automation
- API for platform integration
- VS Code support for developer workflows
- Web UI for triage, governance, and reporting

Outputs: findings, evidence, reports, and audit-ready timelines.

Competitive landscape and positioning

We compete by combining signal quality, validation depth, and workflow governance.

CATEGORY	PLAYERS	TYPICAL STRENGTH	TYPICAL GAP
Enterprise SAST	Checkmarx, Veracode, Fortify, Sonar	Mature rules and enterprise footprint	Noise, slower validation loops
Dev/AppSec Platforms	Snyk, Semgrep, GHAS	Developer adoption and integration	Limited end-to-end evidence workflow
DAST	Invicti, Acunetix, Burp Enterprise	Runtime coverage and scanning depth	Weak code-context closure workflow
AI Copilots	AI assist tools	Fast guidance generation	Inconsistent proof, governance, and traceability

Positioning edge: one execution loop from detection to evidence-backed closure.

Disclaimer: Competitive mapping is directional and based on publicly available product positioning; final diligence should use current feature verification.

SECTION 5

GTM

ICP -> Pilot -> Land -> Expand

Focused go-to-market motion for engineering-led organizations with active release cycles.

ICP and motion

- ICP: mid-market/enterprise web and API product teams
- Pilot: 4-8 week scoped deployment with measurable outcomes
- Land: convert security + platform champions to paid rollout
- Expand: multi-team policy governance and enterprise modules

Channels and milestones

- Channels: founder-led sales, security consultancies, MSSP partnerships
- Q1: design partners + baseline integration
- Q2: pilot conversion playbook + case outcomes
- Q3: enterprise controls + repeatable onboarding
- Q4: partner-led pipeline expansion

PILOT LENGTH

4-8 weeks

Measured outcomes

PRIMARY BUYER

Security + Eng

Joint ownership

EXPANSION PATH

Apps -> Orgs

Land and expand

SECTION 6

INVESTMENT

Raise plan: ~USD 1.2M for 18-month runway

Capital supports team build, product hardening, and pilot-to-revenue conversion.

Investor outcome

- Execution-focused use of funds with milestone gates
- 0-24 month targets: pilot conversion, enterprise readiness, ARR growth
- Terms and valuation to be finalized via diligence and lead alignment

Use of funds mix

Engineering + Security R&D		56%
Cloud + Inference + Ops		20%
GTM + Pilot Conversion		14%
Compliance + Legal + Reserve		10%

SECTION 7

REVENUE MODEL

Subscription-led model with expansion economics

Platform + usage + enterprise modules, with light professional services support.

Commercial structure

- Base platform subscription per org/workspace
- Usage tiers by scan/app/execution volume
- Enterprise modules: governance, private deployment, compliance packs
- Light PS for onboarding and security tuning

Unit economics intent

- Early ACV range: USD 35K-60K
- Expansion: land-and-expand across teams/apps
- Target software gross margin: 70%+
- NRR upside via workflow stickiness and policy lock-in

ACV ENTRY

\$35K-\$60K

Pilot conversion range

GROSS MARGIN GOAL

70%+

Software-led mix

NRR DRIVER

Expansion

Multi-team adoption

SECTION 8

EXPECTED COSTS

Year-1 expected cost structure (honest approximation)

Lean high-skill team + realistic non-people operating spend.

PEOPLE COST (YEAR 1)	COUNT	USD
Full-stack Developer	1	\$35,000
AI Engineers (high skill)	2	\$110,000
Security Researcher / Ethical Hacker	1	\$65,000
DevOps / Platform Engineer	1	\$45,000
Product/GTM Operator	1	\$40,000
Benefits + Hiring Overhead (~20%)	-	\$59,000
Total People Cost	6	\$354,000

NON-PEOPLE COST (YEAR 1)	USD
Cloud + Inference + Storage	\$120,000
Security Labs / Test Infra	\$40,000
LLM Training / Fine-tuning	\$35,000
Tooling / Licenses	\$18,000
Compliance / Legal / Audit	\$22,000
Sales / Marketing / Travel	\$36,000
Ops Contingency	\$24,000
Total Non-People Cost	\$295,000
Total Year-1 Cost	\$649,000

People share		\$354K
Non-people share		\$295K

Average monthly burn approximation: ~USD 54K/month.

Conservative 5-year plan with breakeven in CY 2028

Forecast ties revenue growth to team and operating cost expansion assumptions.

YEAR	CUSTOMERS	ARR	ESTIMATED COSTS	OPERATING RESULT
2027	8	\$350,000	\$700,000	-\$350,000
2028	22	\$1,100,000	\$1,050,000	\$50,000
2029	45	\$2,600,000	\$1,850,000	\$750,000
2030	85	\$5,200,000	\$3,400,000	\$1,800,000
2031	140	\$9,000,000	\$5,700,000	\$3,300,000

ARR vs cost trend (relative scale)

2027 ARR		\$0.35M
2027 Cost		\$0.70M
2028 ARR		\$1.10M
2028 Cost		\$1.05M
2031 ARR		\$9.00M
2031 Cost		\$5.70M

Breakeven callout: **CY 2028** (base case).

Assumptions: pilot conversion, account expansion, controlled hiring pace. Diligence note: model is directional and should be validated with live pipeline data.

Thank you

Next steps: live product demo, secure data room access, and strategic introductions.

Immediate next steps

- Schedule investor demo walkthrough
- Share diligence pack and operating metrics
- Align on round structure and timeline
